PROJECTS

postpandemic Single Page Web App - React + Redux frontend, Rails backend   GITHUB | DEMO
Messages of hope for a world recovering from the Coronavirus Pandemic.
- Makes use of React framework with React Router to organize app and display with RESTful conventions.
- Utilizes Redux Thunk to make async fetch requests to display, create and update posts on Rails JSON API.
- Utilizes React-Bootstrap, Unsplash API, and CSS animations to stylize and enhance user experience.

HellaFresh Single Page Web App - Vanilla Javascript frontend, Rails backend   GITHUB | DEMO
An online ordering template application for all delivery services.
- Employs ES6 and OOJS features to organize code and encapsulate, display and filter re-usable objects.
- Interacts with Rails JSON API with async fetch requests to display and update information across the app.
- Organizes menu items based on category, with a search and filter feature.

Filtered. Ruby on Rails MVC Web Application with OAuth.   GITHUB | DEMO
An App For Coffee Lovers. Filtered lets users review their coffee favorites.
- Connected Rails model relationships allow users to create brands, coffee and reviews through validated forms.
- Constructed user accounts with secure, encrypted signup and login authentication with the use of Devise.
